

Appeal No. 1999-2549
Application No. 08/955,579

APPENDIX

80. An article comprising a conformable magnetic layer comprising:

(a) an organic binder; and

(b) at least 30 volume percent magnetic particles distributed in said organic binder, the magnetic particles capable of being remanantly magnetized to produce a magnetic field sufficient to be sensed by a sensor, said conformable layer being sufficiently conformable to demonstrate at least 25% inelastic deformation under the inelastic deformation test.
